The Mortgage Market

In the third quarter of the year, the 30-year fixed rate hit an all-time low, as investors were skeptical about the recovery of the economy from the shutdowns. According to the mortgage finance provider Freddie Mac, the 30-year fixed rate mortgage dropped to 2.95 percent in Q3 2020 from 3.67 percent a year earlier. In the meantime, in August, the Fed announced the adoption of a more flexible policy that will seek to achieve inflation that averages 2 percent over time. This means that a period where inflation is above 2 percent can compensate for a period when inflation is below 2 percent. This significant change can keep interest rates low for longer periods, which could translate into both long periods of cheap mortgages and stronger job market. Thus, more and more homebuyers and homeowners are expected to take advantage of these ultra-low rates. Looking ahead, NAR is forecasting the 30-year fixed rate mortgage to average 3.1 percent for both 2020 and 2021.
