Overview

The residential real estate market exhibited signs of improvement in February 2024, with most housing indicators suggesting a promising outlook for the remainder of the year.

Existing-home sales experienced the largest monthly increase since February 2023, despite the overall trajectory of decreased sales. In addition, while registering year-over-year decreases in all U.S. regions, the Pending Home Sales Index (PHS), a leading indicator of housing contract activity, also grew in February. The growing supply of homes is stimulating market activity, while demand remains strong, driven by solid job growth. However, despite this positive movement, home sales continue to be lower compared to a year ago. These fluctuations reflect the housing market's response to the broader economic environment, including factors such as mortgage rates and overall economic conditions.

From a broad economic perspective, although the short-term interest rate wasn't changed in the Federal Reserve's meeting, the 10-year Treasury yield increased further during the second month of the year. Nevertheless, with multiple rate cuts to follow by the Fed, NAR predicts that the 10-year Treasury Yield will lower throughout the year, which will present favorable conditions for borrowers. In addition, inflation may not have yet reached the Federal Reserve's goal of 2%, but it's considerably lower than the previous year.

February's notable increase in employment is an important indicator to watch, as job additions build up the long-term demand for housing. In terms of housing supply, new listings marked the largest annual gain since 2021 and the U.S. Census Bureau reported increases in both housing starts and building permits.
Real gross domestic product (GDP) increased at an annual rate of 3.4% in the fourth quarter of 2023, according to the third estimate of the Bureau of Economic Analysis (BEA). The increase primarily reflected increases in consumer spending, exports, as well as state and local government spending. Imports, which are a subtraction in the calculation of GDP, increased as well.

Feb 2024: 5.5%
Jan 2024: 5.5%
Feb 2023: 4.7%

The Federal Reserve did not alter its short-term interest rate in February, keeping it at 5.5% since August 2023. However, several rate cuts are expected later in the year. During the COVID-19 lockdown, the Federal Funds Rate was near 2%.
Consumer prices have been rising at a slower rate than in most of the last three years, but they are still above the Federal Reserve’s desired target of 2%. In February, CPI rose by 3.2%. The main component keeping inflation above target is housing/shelter, which decelerated to 5.7% last month.

In February, a total of 275,000 nonfarm payroll jobs were added, above the average monthly gain of 230,000 over the last 12 months. Job gains occurred in healthcare, government, food and drinking services, social assistance, and transportation and warehousing.
The unemployment rate rose by 0.2 percentage points to 3.9% in February, and the number of unemployed people increased by 334,000 to 6.5 million. The same month last year, the unemployment rate stood at 3.6%, and the number of unemployed people was 6.0 million.

In February, personal consumption expenditures increased 0.8%. The $145.5 billion increase in spending reflected an increase of $111.8 billion in spending for services and a $33.7 billion increase in spending for goods.
In February, the 10-year Treasury rate stood at 4.2%, an increase from the previous month’s rate of 4.1%. NAR predicts that the yield will stay below 4% for the remainder of the year, presenting favorable conditions for borrowers.

Mortgage interest rates rose in February, averaging 6.8% for the month. Although still below the rates seen in the fall of 2023, this increase impacts the flow of new home buyers into the spring market.
Existing-home sales surged 9.5% in February to a seasonally adjusted annual rate of 4.4 million, the largest monthly increase since February 2023. Among the four regions, sales jumped in the West, South, and Midwest and were unchanged in the Northeast. Year-over-year, sales declined 3.3%.

The Pending Home Sales Index (PHSI) increased to 75.6 in February by 1.6% compared to the previous month. The Midwest and South posted monthly gains in transactions, while the Northeast and West recorded losses. Year-over-year pending transactions were down 7.0%.
In February 2024, new listings experienced a notable year-over-year increase of 14.8%, compared to 8.2% in the prior month. This marks the largest annual gain in listings since May 2021.

Housing affordability continued to improve in January compared to the prior month, yet it remained below the fixed index of 109.2 recorded a year ago. The recently recorded national index was above 100, which means that a family with a median income has more than the income required to afford a median-priced home.
Feb 2024: **$388,700**  
Jan 2024: **$382,900**  
Feb 2023: **$368,100**

The median sales price of single-family homes increased to $388,700 in February, still surpassing the $368,100 median price for a year earlier.

Feb 2024: **1.52 million**  
Jan 2024: **1.37 million**  
Feb 2023: **1.44 million**

In February, privately owned housing construction surged to a seasonally adjusted annual rate of 1.52 million. This represents a substantial 10.7% increase over the revised January estimate of 1.37 million and a 5.9% rise compared to housing starts recorded in February 2023. Overall, this could reflect continued growth in the housing market over the next quarters.
Privately-owned housing units authorized by building permits in February were at a seasonally adjusted annual rate of 1.52 million. This is higher than the revised January rate of 1.49 million and above the February 2023 rate of 1.48 million.

February’s inventory of unsold listings was up 5.9% from last month. Compared with last year, inventory levels were up 10.3%. Demand is currently outpacing inventory.
The National Association of REALTORS® is America’s largest trade association, representing more than 1.5 million members, including NAR’s institutes, societies and councils, involved in all aspects of the real estate industry. NAR membership includes brokers, salespeople, property managers, appraisers, counselors and others engaged in both residential and commercial real estate.

The term REALTOR® is a registered collective membership mark that identifies a real estate professional who is a member of the National Association of REALTORS® and subscribes to its strict Code of Ethics.

Working for America’s property owners, the National Association provides a facility for professional development, research and exchange of information among its members and to the public and government for the purpose of preserving the free enterprise system and the right to own real property.

RESEARCH GROUP
The Mission of the NATIONAL ASSOCIATION OF REALTORS® Research Group is to produce timely, data-driven market analysis and authoritative business intelligence to serve members, and inform consumers, policymakers and the media in a professional and accessible manner.
